```
# Is a user-submitted word a palindrome?
```

if

```
    print "Hooray! You entered a palindrome"
```

else

```
    print "You did not enter a palindrome"
```

Palindrome?

Spelled the same backwards and forwards

```
# Is a user-submitted word a palindrome?
word = input("Please enter a word: ")
reversed_word = word[::-1]
if word == reversed_word:
    print("Hooray! You entered a palindrome")
else:
    print("You did not enter a palindrome")
```

Pause: How did this work again?

Truthy and Falsy
