

1 2 "red" "blue"

0

#

=

>

1

07 # Raises a TypeError

=> 4

2

#

=>

(

1,

2

)

['red', 'in', '#=>True']

Tuples

```
fish = (1, 2, "red", "blue")  
fish[0]          # => 1  
fish[0] = 7      # Raises a TypeError
```

You can't change any
elements in a tuple!

```
len(fish)        # => 4  
fish[:2]         # => (1, 2)  
"red" in fish    # => True
```

Although the usual sequence
methods still work

Argument Packing and Unpacking
