

with open('knights.txt', 'r') as f:

content = f.read()

print(1/0)

fctlossesold#=>true

#content is still in scope

content: in urls()

Be Responsible: Use Context Managers

```
with open('knights.txt', 'r') as f:
```

```
    content = f.read()
```

```
    print(1/0)
```

The `with expr as var` construct ensures that `expr` will be "entered" and "exited" regardless of the code block execution

```
f.closed # => True
```

```
# `content` is still in scope
```

```
'content' in locals()
```
