

#Howshouldwecheckforanemptylist?

data == []

infanta

process(data)

else:  

```
print('There's no data!')
```

# Checking for Truthiness

with Steven Colbert

# How should we check for an empty list?

```
data = []
```

```
...
```

```
if data:
```

```
    process(data)
```

```
else:
```

```
    print("There's no data!")
```

Notably, we don't use `if len(data) == 0`

You should almost never test  
`if expr == True`

# Loops
