Using **pip** - uncommon commands

Install to Python user-specific install directory

```
$ pip install --user package_name
```

Require specific versions to be installed

```
$ pip install "package_name==4.1.0"
```

```
$ pip install "package_name >= 1.0, != 1.4.0, < 2.0"
```

Show information about a particular package

```
$ pip show package_name
```

Search PyPI for matching packages

```
$ pip search query
```
