data == []

infanta

process(data)

else:  

```
print('There's no data!')
```

Checking for Truthiness

with Steven Colbert

How should we check for an empty list?

```
data = []
```

```
...
```

```
if data:
```

```
    process(data)
```

```
else:
```

```
    print("There's no data!")
```

You should almost never test
`if expr == True`

Loops
