Did we Solve It?

```
class Dog:
    # Let's try a default argument!
    def __init__(self, name='Mr. B', tricks=[]):
        self.name = name
        self.tricks = tricks

    def teach_trick(self, trick):
        self.tricks.append(trick)
```

Hmm...
