Requests: HTTP for Humans

pypi v2.14.2 **license** Apache 2.0 **python** 2.6, 2.7, 3.3, 3.4, 3.5, 3.6 **build** failing **codecov** 88% **contributors** 429 **Say Thanks** !

Requests is the only *Non-GMO* HTTP library for Python, safe for human consumption.

Warning: Recreational use of the Python standard library for HTTP may result in dangerous side-effects, including: security vulnerabilities, verbose code, reinventing the wheel, constantly reading documentation, depression, headaches, or even death.

Behold, the power of Requests:

```
>>> r = requests.get('https://api.github.com/user', auth=('user', 'pass'))
>>> r.status_code
200
>>> r.headers['content-type']
'application/json; charset=utf8'
>>> r.encoding
'utf-8'
>>> r.text
u'{"type":"User"...'
>>> r.json()
{u'disk_usage': 368627, u'private_gists': 484, ...}
```

TensorFlow is an open source software library for numerical computation using data flow graphs. Nodes in the graph represent mathematical operations, while the graph edges represent the multidimensional data arrays (tensors) that flow between them. This flexible architecture lets you deploy computation to one or more CPUs or GPUs in a desktop, server, or mobile device without rewriting code. TensorFlow also includes TensorBoard, a data visualization toolkit.
