Joining Strings

```python
s = ''
for color in colors:
    s += color

s = ''
for color in colors:
    s += color + ', '
s = s[:-2]
```

```python
s = ''.join(colors)

s = ', '.join(colors)
```

Format Strings (for now)

```
print("Hi %s, you have %i texts"
    % ("Sam", 6))

print("Hi %(name)s, you have
    %(num)i texts"
    % {'name': Sam', 'num': 6})
```

```
print("Hi {}, you have {} texts"
        .format("Sam", 6))

print("Hi {name}, you have {num}
texts".format(name="Sam", num=6))
```
