```
# Let's try a default argument!
```

```
def                    'Lassie'
```

def

Did we Solve It?

```python
class Dog:
    # Let's try a default argument!
    def __init__(self, name='Lassie', tricks=[]):
        self.name = name
        self.tricks = tricks

    def add_trick(self, trick):
        self.tricks.append(trick)
```

Hmm…
