```
def          print
    0        0
```

Rules about Function Calls

Keyword arguments must follow positional arguments

All keyword arguments must identify some parameter

  Even positional ones

No parameter may receive a value more than once

```
def fn(a): print(a)
fn(0, a=0)
```

Not allowed!
Multiple values of a

Variadic Positional Arguments
