'name' 'quest' 'favorite color'

'Lancelot' 'To seek the holy grail' 'Blue'
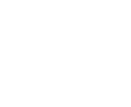

```
for          in zip
```

```
print 'What is your {0}? {1}.'
```

What is your name? Lancelot.

What is your quest? To seek the holy grail.

What is your favorite color? Blue.

zip

```python
questions = ['name', 'quest', 'favorite color']
answers = ['Lancelot', 'To seek the holy grail', 'Blue']
for q, a in zip(questions, answers):
    print('What is your {0}? {1}.'.format(q, a))

# =>

# What is your name? Lancelot.
# What is your quest? To seek the holy grail.
# What is your favorite color? Blue.
```

The `zip()` function generates pairs of entries from its arguments.
