```python
# We can run a module (demo.py) as a script
```

```
        # Doing so sets __name__ = '__main__'
```

```
# We can even jump into the interpreter after we're done
```

Access to top-level symbols

Refresher: Running Modules as Scripts

```
# We can run a module (demo.py) as a script
$ python3 demo.py   # Doing so sets __name__ = '__main__'
<output>

# We can even jump into the interpreter after we're done
$ python3 -i demo.py
<output>
>>> # Access to top-level symbols
```

Aside: Finding Modules
